DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement filed 12-10-02 has been considered.

Drawings

3. The drawings are objected to because in figure 4, the label "AND" should read -- AND1--. Line GIO1R should connect to switch S21. And line GIO2L should connect to switch S22. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 20-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 20 recites the limitation "the input/output control circuit" in lines 1-2.

There is insufficient antecedent basis for this limitation in the claim.

Claims 21 and 22 are rejected for depending on claim 20.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Ooishi et al. (U.S. Patent 6,067,260).

Ooishi et al. teach a memory device (figures 11-12) comprising memory blocks (Bank-0, Bank-1) including primary memory cells in regions 100a0, 100a1 and redundant memory cells in spare regions SR0, SR1; sense amplifiers 606, 608 connected to global input/output lines G-I/O; and a control circuit including switching circuit in figure 13 and multiplexer 618 in figure 12 for replacing a defective regular memory cell column with a redundant memory cell column (column 16, line 27 through column 17, line 46).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Abe (U.S. Patent 5,293,348), Koh (U.S. Patent 5,596,536) and Arimoto (U.S. Patent 6,249,474) teach circuits and methods for substituting defective memory cell columns by spare memory cell columns.
